Bedouin M34

dividual Arab is free to transfer his allegiance to another chieftain if he so desires. Such a transfer quite frequently takes place. In a loose general way each tribe has certain areas over which it grazes its camels and its goats and sheep. In proportion to the number of animals the area covered is enormous, for throughout the hot, dry summer months locations must be frequently changed and new pastures found. The prosperity of the desert Arab, poor as it is at the best, depends on a rainfall so scanty that one marvels at the existence of any life at all. There are whole districts, like the Great Southern Desert and the black plain encountered between Hasa and Riyadh, where not even the hardiest Bedouin attempts to live. In winter the temperature goes down so low that frost is seen, and in the summer the country glows with heat like a furnace. No mineral resources are known at present, and there is no reason to suppose that the most careful scientific search would find any.

Bedouins who live in the desert own a certain number of camels, and turn them out to graze over large areas. Camels require little water and can go for three days, if necessary, without a drink, an ability which adds enormously to their value in a country where it is frequently necessary to travel scores of miles to find a well. The camel is the one support of Bedouin life. Camel's milk is the principal article of diet, with a few dates for a dessert and camel's meat as an addition for feasts and high days. The hair of the camel furnishes clothes, and his back affords the only method of transportation possible in the desert. Indeed the Arab looks on the camel as God's special gift to the desert nomad, and he is not far mistaken.

Where wells are somewhat close together and the for-
